

PROJECT 1 REPORT

DATA CLEANING & PREPARATION

Submitted By:

Name : Sirimalla Vasu

Track : Data Analytics

Organization : Decode Labs

Batch : 2026

1. OBJECTIVE

The objective of this project is to clean and prepare the dataset by identifying missing values, checking for duplicate records, and validating data formats to ensure data quality and consistency.

2. TOOLS USED

- Google Sheets
- Microsoft Excel
- COUNTIF() Function

3. TASKS PERFORMED

- Checked the dataset for duplicate Order IDs.
- Verified that no duplicate records were present.
- Identified missing values in the CouponCode column.
- Replaced missing values with "NO DISCOUNT".
- Validated the Order Date format (YYYY-MM-DD).
- Verified numeric columns including Quantity, Unit Price, and Total Price.
- Ensured consistency across all records.

4. RESULTS

- Total Records Processed : 1200
- Duplicate Records Found : 0
- Missing Values Handled Successfully.
- Dataset Cleaned and Prepared for Further Analysis.

5. CONCLUSION

The dataset was successfully cleaned and standardized.

All missing values were addressed, duplicate records were verified, and data consistency was maintained. The final dataset is ready for exploratory data analysis and business insight generation.
